AI Acknowledgement

CL_ AppliedSession21TeamD

I acknowledge the use of [1] Gemini [2] (https://gemini.google.com/) [3] to add javadoc to my own work. On 4 June 2026 I submitted my entire code for task 1,2,3,4 that I created with the instruction to “Add Javadoc to each class/interface that I have provided”. [4] The output was then modified further to better represent my own style.

I acknowledge the use of [1] Claude [2] (https://claude.ai/login) [3] to create the unit tests for Req 1,2,3,4 to test the code created. [4] The output was then discussed with the team.

I acknowledge the use of [1] Claude [2] (https://claude.ai/login) [3] to create the design for the singleton manager and observer interface for req 1. [4] The output was then discussed with the team.

REQ5

DeepSeek + Claude were used in tandem to produce the skeletons of files for REQ 5, I refactored every generated file for code smells and to follow polymorphic design closer, along with applying key principles such as DRY , KISS, and Loose coupling specifically. Then based on the current codebase + instructions provided at the EdStem guide: https://edstem.org/au/courses/30595/lessons/97012/slides/742857, generated unit tests.
