Foundation Models Used

REQ5

DeepSeek + Claude were used in tandem to produce the skeletons of files for REQ 5, I refactored every generated file for code smells and to follow polymorphic design closer, along with applying key principles such as DRY, KISS, and Loose coupling specifically. Then based on the current codebase + instructions provided at the EdStem guide: https://edstem.org/au/courses/30595/lessons/97012/slides/742857, generated unit tests.
